For ZETA GUNDAM[YuA Ver.]

两种比例的优劣：
Advantages and disadvantages of the 2scales:

1/144: 节省大量耗材，以最小的体积还原建模，拥有最大限度可动。但细小的悬垂不尽人意，零件存在松动，把玩则需要粘接。
1/72：拼装体验顺畅，支撑容易拆除，各处细节较为精准的还原了建模，背包额外增加了热核融合引擎展开模式。其劣势在于自重大，不容易摆出 POSS，手臂关节的角度也有所减少。配置中不包含米加粒子炮，这是因为单一关节不足以抵抗射击姿态的力矩，额外增加了 IF 勾爪作为弥补。

简之，1/72 省事，1/144 省料。不要尝试放大 1/144 或缩小 1/72 本体，两者有至少 24 个零件不通用，到底有几个我也没数（目移。

1/144: It saves a large amount of consumables, reproduces the model in the smallest volume, and has maximum mobility. However, the small overhangs are not satisfactory, the parts are loose, and gluing is required for play.
1/72: The assembly experience is smooth, the supports are easy to remove, and the details everywhere accurately reproduce the model. The backpack has an additional mode. Its disadvantages are that it is heavy, making it difficult to pose, and the range of motion of the arm joints is reduced. MCannon is not included in the configuration because a single joint is not strong enough to resist the torque in the shooting pose.additional IF Claws are added as a compensation.

In short, the 1/72 is more convenient, while the 1/144 is more material - saving. Don't enlarge the 1/144or shrink the 1/72. At least 24 parts of the two scales are not interchangeable...can't remember the exact number.

推荐使用的颜色：
Recommended colors:

准备了几种配色方案供选择，当然，您可以自由发挥。

	①	②	③	④	⑤	⑥	⑦(1/72)
006-1(Basic)	W	B	R	Y	G	K	[TPU]
006-3B(GreyZ)	Y	O	K	K	G	O	[TPU]
006-P2/3C(RedZ)	G	R	K	K	G	R	[TPU]
006-3S(StrikeZ)	W	W	P	Y	G	W	[TPU]
006-Mk1A(Simple)	W	W	W	W	G	G	G

Several color-matching schemes are prepared for you to choose from. ofc, you can use your own creativity.

打印前的准备：
Before printing:

试模基于 Bambu PLA Basic 与官方 PEI 板，使用默认配置及 35 度仓温，笔者保证其打印及热床粘接效果，对于其他耗材 / 打印板，请根据实际情况适当调整裙边及其他配置，避免翘边。
部分盘名称中带有 Smooth，这意味着推荐使用光面打印板——盘中零件的热床粘接面是主展示面，光面效果最佳。
还有一些零件开启了熨烫功能，这意味着它们的顶面是主展示面，默认熨烫流量为 30，可以根据情况自行调整。
1/144 关节零件在首次运动时不要太过用力，左右反复小范围掰动，能够正常运动后就没问题了。
1/72 的 TPU 零件可以使用其他材料替代，使用 TPU 时打印过盈配合的盘 8，其他材料时打印间隙配合的盘 9。

The test was based on Bambu PLA Basic and the official PEI plate, using default setting and a chamber temperature of 35 ℃ . The author guarantees the printing quality and the adhesion to the heated bed. For Other situations, adjust the brim and other settings appropriately according to the actual situation to avoid warping.
Some plate names contain "Smooth", which means a smooth plate is recommended. The side of the parts on the spool that adheres to the heated bed is the main display side, and a smooth surface will give the best result.

Some parts have the ironing function enabled, which means their top surfaces are the main display sides. The default set is 30, and you can adjust it according to the situation.
Don't use excessive force when moving the 1/144 joint parts for the first time. Gently move them back and forth within a small range from side to side. Once they can move normally, no problem.
The 1/72 TPU parts can be replaced with other materials. When using TPU, print plate 8, Otherwise print plate 9.

打印后的处理：
Post printing:

建模时所有连接处均按照理想情况设置间隙，但打印有误差，根据情况切掉一点或塞点胶带。1/72 推荐在脚下涂极少量啫喱胶，减少打滑。**也可以不使用 TPU 打印, 在打印后摆出合适的姿势并粘死**。

During the modeling process, the gaps of all joints were set under ideal conditions. However, there are printing problems. You can cut off a little or insert some tape according to the actual situation. For the 1/72 models, it is recommended to apply a very small amount of jelly glue under the feet to reduce slipping. **Alternatively, print without TPU and choose a cool pose, then glue it in place.**

如何寻找零件?
How to find the parts?

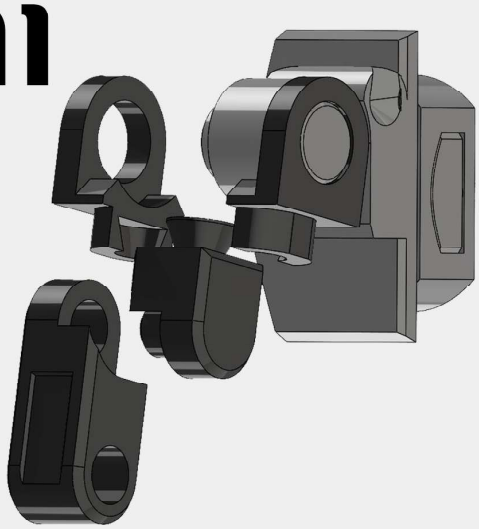

你会在 Bambu Studio- 对象一栏看到形如 [X2]objcode.STL 的命名，其中的 X2 便是它在说明书中首次出现的步骤。

You will see names like [X2]objcode.STL in the "Objects" section of Bambu Studio.The "X2" in it represents the step where the part first appears in the instruction manual.
